

Synactive components at a glance

GuiXT simplifies the SAP ERP user interface without modifying the system.

"Less training, fewer mistakes, and greater user acceptance of SAP ERP."

Layout customizing

- Move or delete fields, table columns and pushbuttons
- Modify field texts, headings and pushbutton labels
- Add texts, tips and group boxes
- Display images
- Simultaneously modify texts on all SAP ERP screens

Navigation, data entry

- Add your own pushbutton functions
- Set default values
- Offer radiobuttons instead of coded input
- Restrict input to capital letters or numbers
- Change the length of input fields

Miscellaneous

- Central administration with local cache
- Up to 4 script directories
- Display of data dependent images (e.g. product images)
- Start PC applications by clicking on an image
- Images in list displays

InputAssistant simplifies and speeds up work with SAP ERP.

"Fast data entry and fewer screens."

Rapid data input

- Local value help
- Input history with texts
- Input combinations for individual business cases

Single screen transactions and navigation

- Combine multiple navigation steps
- Create single screen transactions

Miscellaneous

- Add your own data integrity checks
- Design multi layered graphical menus

Controls enables you to embed standard UI elements such as lists, tree views and charts into SAP transactions.

"SAP screens combined with the advantages of ActiveX technology: list views, tree controls, HTML."

Integrate ActiveX controls SAP GUI

- Display an ActiveX object in a SAP GUI window
- Call VBScript functions
- Access GuiXT variables from VBScript
- Execute RFC calls in VBScript

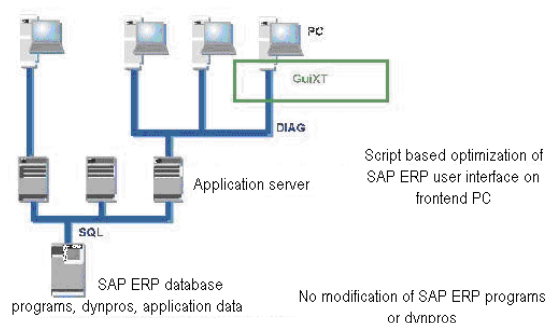

- Call VB.NET functions
- Handle control events, e.g. a mouse click
- Embed the Internet Explorer Control and interact with the HTML page using the connectHTML command

Script Editor Pro enables you to design GuiXT scripts very easily also in WYSIWYG mode.

- WYSIWYG mode
- Syntax-coloring
- Integrated help for GuiXT keywords
- Easy navigation to "include" files or "process=" files
- Pretty print (indents if/else/endif)
- Putting code blocks in comment
- Inserting commands
- Self-defined code blocks
- Writing backup files

- Choose and insert SAP icons
- Check syntax with proposed corrections
- See a list of all scripts included within a script
- Get an overview of all variables used
- Compare scripts and backups
- See and search a list of all used elements
- Add options to a command by choosing from a context menu
- Create a list of all the installed ActiveX-components

Technology
