

GuiXT components at a glance

GuiXT simplifies the SAP ERP user interface without modifying the system.

"Less training, fewer mistakes, and greater user acceptance of SAP ERP."

Layout customizing

- Move or delete fields, table columns and pushbuttons
- Modify field texts, headings and pushbutton labels
- Add texts, tips and group boxes
- Display images
- Simultaneously modify texts on all SAP ERP screens

Navigation, data entry

- Add your own pushbutton functions
- Set default values
- Offer radiobuttons instead of coded input
- Restrict input to capital letters or numbers
- Change the length of input fields

Miscellaneous

- Central administration with local cache
- Up to 4 script directories
- Display of data dependent images (e.g. product images)
- Start PC applications by clicking on an image
- Images in list displays

InputAssistant simplifies and speeds up work with SAP ERP.

"Fast data entry and fewer screens."

Rapid data input

- Local value help
- Input history with texts
- Input combinations for individual business cases

Single screen transactions and navigation

- Combine multiple navigation steps
- Create single screen transactions

Miscellaneous

- Add your own data integrity checks
- Design multi layered graphical menus

Controls enables you to embed standard UI elements such as lists, tree views and charts into SAP transactions.

"SAP screens combined with the advantages of ActiveX technology: list views, tree controls, HTML."

Integrate ActiveX controls SAP GUI

- Display an ActiveX object in a SAP GUI window
- Call VBScript functions
- Access GuiXT variables from VBScript
- Execute RFC calls in VBScript
- Handle control events, e.g. a mouse click
- Embed the Internet Explorer Control and interact with the HTML page using the connectHTML command

Viewer enables you to integrate RTF and HTML files in SAP ERP screens.

"...SAP ERP combined with the advantages of HTML and JavaScript"

Display

- Integrate HTML files and RTF files (e.g. from Word) in SAP ERP screens
- Create display transactions in HTML format with automatic SAP ERP value substitution

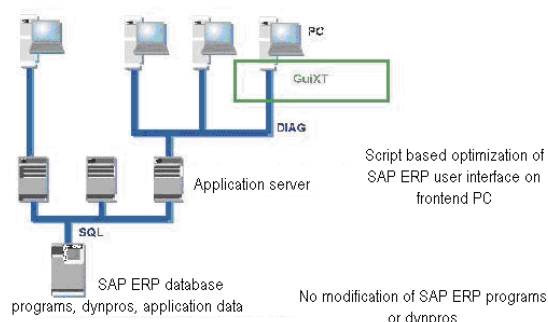

Interaction with SAP ERP

- Activate SAP ERP functions by clicking on HTML links
- Write your own SAP ERP data entry application in HTML and JavaScript
- Set SAP values automatically by clicking on HTML links

Designer is a WYSIWYG editor for GuiXT.

"The layout of an SAP ERP screen is personalized in next to no time."
